

The 0-1000 Number Line is intended for display at children's eye level in a corridor so they can see the place and value of numbers to one thousand. It needs to be either printed onto A3 paper or printed onto A4 and then enlarged to A3 on a photocopier. Cut out each section of the printed number line and laminate it. Use an adhesive to join each section, overlapping them to create a continuous number line from 0-1000 with equal divisions between each number.
